How to Applique

Materials needed for Applique:

Fusible web- Thermoweb has a great product. Heat-n-bond lite

Iron

Thread

Instructions- How to applique using fusible web:

- 1) Print off your templates....if you need to resize them, do that now. Also if you are appliqueing letters, you will need to print them in reverse.
- 2) Lay your paper under the fusible web and trace. The smooth paper side of the fusible will be on the top. You will be writing on this.
- 3) Cut around your drawn templates
- 4) Lay the templates on the wrong side of the fabric. Don't be like a kindergartner. Put the templates to the edge and make the most out of your fabric piece.
- 5) Iron. Now, you need to pay attention..... press the iron down. DON'T move the iron back and forth. That could shift the template before it is fused to your fabric. Just place the iron on top and press. Lift, and move to the next spot. Repeating.
- 6) Cut out pieces using scissors or rotary cutter.
- 7) Lay in place...and play with your placement
- 8) Peel the paper backing off and lay in place
- 9) Iron -again, press, don't scoot the iron.
- 10) Stitch around the edge to finish them. You can use the button hole, satin stitch, raw edge applique.

You can have some fun here- choose different colors of thread, a different thread for each piece, contrasting, black, matching. You name it. They will each give you a different look, so give some thought about your thread.

When using the lite product, you will need to sew the edges to secure. The heavy will stay on longer with less stitching, but if you are using the applique pieces for clothes, or towell or quilts that will be washed a bit, you will want to secure them with stitching.
